

The Graduate School at the Department of Psychology, University of Copenhagen

Course description:

Title:	TVA based assessment of visual attention
Date:	20-21 June 2011 + optional 22 June
Place:	Department of Psychology University of Copenhagen Øster Farimagsgade 2A, 2 nd floor DK-1353 Copenhagen K Denmark
Organizer:	Ph.D. student Thomas Alrik Sørensen, University of Copenhagen
Teachers:	Professor Claus Bundesen, University of Copenhagen Associate Professor Thomas Habekost, University of Copenhagen Postdoctoral fellow Randi Starrfelt, University of Copenhagen Postdoctoral fellow Anders Petersen, University of Copenhagen Ph.D. student Signe Vangkilde, University of Copenhagen
Language:	English
ECTS credits:	2 points (3 points in case of participation in the optional course day)
Course description:	This ph.d.-course provides an introduction to TVA based assessment, a highly precise method for measuring individual components of visual attention. The method is grounded in a general theory of attention (TVA; Bundesen, 1990; Bundesen, Habekost & Kyllingsbæk, 2005) and has been applied in a large number of research projects on normal and clinical populations over the last decade. The course includes an introduction to the general theory of attention and provides a step-by-step explanation of the assessment method and how to apply it in different contexts (including hands-on exercises). On the third, optional day, participants can present their projects for feedback from experienced researchers in the field.
Target group:	The course is primarily targeted at ph.d.-students with research projects that include TVA based studies of normal or clinical populations, or who consider to do so.
Enrollment:	Please enroll at our website: http://www.psy.ku.dk/Forskning/phd-skolen/kursustilmelding/
Enrollment deadline:	1 May 2011. Please include a description of your ph.d.-project (max 0.5 page)
Limit:	Participation in the course is free of charge, but the total number of participants is limited.
